

## **1. Our History and Perspectives**

Be ahead 15 years now our enterprise occupies leading positions in sphere of manufacture of industrial and non-standardized equipment as well as machinery tools and consumers' constructions. Every year we increase volumes and range of domestic production preserving yet highest quality and reliability of our constructions that all these years have been the peculiar features of our manufacture.

Recently, our business covers four consumers' domains:

1. Light industry and machinery
2. Consumers' constructions
3. Light automobile industry
4. Technical documentation engineering

## **2. Recent Export Relationship**

The Zhitomir factory of non-standardized equipment established wide export relationships with many countries of CIS as well as European Countries. Among recent export advances there are: Estonia and Germany. The latest manufacture project for our respective German consumer resulted in signing of an agreement for long-term cooperation and further manufacture of a rolling press in regular shipment and huge amount. Estonian consumer applied for a square log notching machine and approved the shipment.

## **3. Our corporate and industrial powers**

The human potential of the enterprise is represented by 25 high-skilled engineers and technicians (managers staff exclusive), to design and manufacture almost all types of non-standardized equipment and machinery. 5 of our engineers possess the highest qualification approved, having a long-term practice at the ZIL-Factory.

The manufacturing area of the enterprise is about 450 sq. meters. We possess all the necessary equipment and machinery to satisfy our industrial needs still having enough powers to widen manufacture. Among the equipment we employ there are: a trolley of 3.5 tone capacity, 4 turning and 4 milling workstations, a gear-milling machine, a gear-shaping machine, a vertical slotting machine, a coordinate boring-and-milling machine, a hydraulic press, a pipe bender, a grinding and polishing machine, a chamber electric furnace etc. The welding industrial group is equipped with semiautomatic welders and welding machines that work in gas environment, some direct-current transformers and a plasma jet welding equipment.
